

# Programmatically Interacting with the Vue Router

**Nertil Poci**  
Software Engineer

# Overview

## Interacting with the Vue Router

- Go back button
  - `go(n)`, `back()`
- Pushing new routes to the navigation history
- Replace navigation history

# Creating a Go Back Button

# Programmatic Navigation

**Navigate**

**Replace**

**Traverse**

```
router.go(1)
```

```
router.go(-1)
```

```
router.back()
```

```
router.forward()
```

```
router.go(n)
```

◀ **Move forward by one record. Same as browser forward button**

◀ **Go back one record. Same as browser back button**

◀ **Helper function to go back, same as router.go(-1)**

◀ **Helper function to go forwards, same as router.go(1)**

◀ **Go forwards or backwards by n records**

# Navigating to Routes Programmatically

# Replacing Current History

# Summary

## Interacting with the Vue Router

- Go back using a button
- Redirect the user programmatically after they complete an order
- Replace navigation history to prevent going to the same page when the native browser navigation buttons are used
